

Advantage eClinical Cloud

Conducting a clinical trial is hard enough, your technology shouldn't make it harder.

We know how difficult it can be to deal with lots of systems that don't work well together. That's why we developed a single application for patients, sites, CROs, and Sponsors, to conduct clinical research and put the focus back on developing the next generation of treatments. Advantage Cloud is the industry's first truly unified eClinical platform.

Unified Platform Features

- **User Management** – Manage user roles and permissions in one location across all trials and applications.
- **Single Sign-On** – Sign in once for access to all applications through the click of a button.
- **Study Builder** – Build your studies in one location across all your applications.
- **Reporting & Analytics** – Work with real-time, cross application data that eliminates the need for costly, error-prone integrations between applications.
- **Cloud Technology** – Access through reliable, scalable cloud technology and benefit from simpler maintenance and upgrades.

Applications

EDC - An advanced and robust solution for data capturing, managing, cleaning, and reporting your trial data.

eCOA / ePRO - An application for direct data collection in web enabled devices, it provides study participants with a simple, straightforward user interface (also supports BYOD).

RTSM - A complete randomization and trial supply management solution that supports a wide range of trial designs and complexities across any therapeutic area.

TeleHealth - A fully integrated solution that allows site staff to meet virtually with patients in a secure and fully documented manner.

“The Advantage eClinical Cloud has been a game changer in terms of simplifying how we manage and run our trials. Our sites are also extremely happy that we’ve given them technology that actually makes their lives easier, not harder! We’ll never go back to our old clinical trial technology.”

- Clinical Operations Executive

Advantage eClinical Cloud

Advantage eClinical Cloud- the industry’s first truly unified eClinical platform. A single application for patients, sites, CROs, and Sponsors to conduct clinical research. Simplifying how trials are managed, Advantage eClinical Cloud is putting the focus back on developing the next generation of treatments.
