

Veridix Enterprise Reporting Agent (VERA)

Democratize your data. Accelerate your insights.

VERA is a next-generation, AI-powered reporting platform designed to transform how clinical trial professionals' access and analyze data. Built as a self-learning foundation model, VERA enables users to generate dashboards, visualizations, and custom reports simply by asking questions in natural language – no statistical tools or programming knowledge required. By replacing legacy BI platforms with an intuitive, no-code interface, VERA democratizes data access, accelerates trial oversight, and significantly reduces the cost and complexity of traditional reporting.

VERA Features

- **Conversational Reporting Interface** – Use simple English queries to generate reports, visualizations, and datasets – no SQL or coding required.
- **On-Demand Dashboards & Visuals** – Instantly create and export tables, charts, listings, and performance dashboards.
- **Pre-Built Insight Dashboards** – Access reusable templates for common KPIs like enrollment, data quality, and query trends.
- **Custom Reporting & Exports** – Build ad hoc reports for scenario modeling, further analysis, and cross-functional sharing.
- **Self-Learning AI Engines** – Continuously improves based on usage patterns, clinical terminology, and data structures.
- **Role-Based Security & SSO** – Enterprise-grade access controls, audit trails, and integration with organizational policies.
- **Platform and Data Model Agnostic** – Enable consistent reporting across any platform or data model with no dependency on underlying systems.

VERA Benefits

Cost and Time Savings

Reduce license and maintenance costs by eliminating reliance on legacy BI tools.

No-Code, Self-Service Analytics

Empower non-technical users to independently explore and extract insights.

Greater Efficiency

Reduce backlog and bottlenecks from manual reporting workflows.

Audit-Ready Transparency

Maintain data lineage and compliance with built-in governance and traceability.

VERA Reporting Interface

VERA goes beyond traditional BI tools by enabling clinical professionals, not just analysts, to explore data, spot trends, and share insights using everyday language. It's a smarter, more intuitive way to unlock value from your trial data – right when you need it.

Why Choose VERA?

Purpose-Built for Research

Designed with clinical workflows, terminology, and data models in mind—no retrofitting needed.

Replaces Costly, Outdated Tools

Eliminates report development cost and time by reducing reliance on data analysts, legacy BI platforms, and manual reporting workflows, with demonstrated success across many studies

Truly Self-Service

Enables non-technical users to generate reports and insights using natural language—no SQL or programming required.

Maintenance-Free Platform

Zero platform upgrade costs, regression testing, or software versioning.

Real-Time, Insight-Driven Decisions

Supports rapid analysis of trends, study progress, and KPIs to adjust trial strategies using up-to-date data and role-based access.

Vera Use Cases

✓ Enrollment and site performance tracking

✓ Portfolio-level KPI reporting and study roll-ups

✓ Collaborative dashboards for cross-functional teams

✓ Query resolution and data quality monitoring

✓ Sponsor-ready visualizations and data extracts
